Some Examples of Late-season Resources Available in the Research Library of <http://www.nwpotatoresearch.com/>

It has been a busy summer, and we in the research and extension community have been slow to provide you with new content and information in Potato Progress. In that light, I wanted to remind you that the Research Library section of the Northwest Potato Research Consortium's website, <http://www.nwpotatoresearch.com/>, contains all past issues of Potato Progress, all the Proceedings from the Washington and Washington-Oregon potato conferences, many extension documents from the 1970s onward, and much more. The search feature on the opening page of the library is very powerful and flexible but might take some effort to learn. Note the list of "helpful hints" for searching the library. These are:

1. * is a wildcard for any number of characters
2. ? is a wildcard for any single character
3. * and ? cannot be used at the beginning
4. ~ can be used to search similar words
5. Use "... " around phrases (e.g. "pesticide levels")
6. Use AND to require a match for multiple terms
7. Use OR to look for any of multiple terms
8. Use NOT to restrict certain results ("pest NOT levels")
9. Group with (...) any combination of the above

These might be familiar to those of you old enough to remember the beginning of the Internet and the older search engines before the modern functionality of Google.

I did a quick search myself, aiming to find some articles that might be interesting to you this time of the season. Here is some of what I found (titles are clickable and will take you to that article in our database):

- [How does In-season Heat Affect Postharvest Physiology & Quality...?](#) N.R. Knowles, D.H. Zommick, L.O. Knowles, J.M. Blauer, D.J. Herman & M.J. Pavek. From the 2014 Proceedings of the WA-OR Potato Conference.
- Although Dennis Johnson has retired from WSU, we can still see his late-season management recommendations for late blight: [Potato Progress Volume 17 Number 13](#).
- A very recent article about Fusarium management, [Potato Progress Volume 19, Number 5](#), from Jeff Miller, Terry Miller, Kasia Duellman & Nora Olsen.
- [Tuber Symptoms Associated with Tobacco Rattle Virus Infections](#), Potato Progress Volume 8 Number 1, by Jim Crosslin and Phil Hamm.
- Although from 2003, still a valuable article: [Biology and Management of Root-Knot Nematodes on Potato in Washington](#). G. S. Santo, H. Mojtahedi & J. H. Wilson.
- [Refining Storage Management](#), by Bob Hesse, from the 2007 Washington State Potato Conference.
